Claim 9-10; Page 77: 109pp; English.

Claim 9-10; Page 77: 109pp; English.

MRNA from the known hybridona Fl05 was converted to CDNA and this subjected to PCK amplification using primers corresp. to appropriate parts of the heavy or light chains and having restriction sites to permit cloning. The extension prods. Were isolated and sequenced. The recombinant human monoclonal antibody (MAb) binds to a discontinuous epitope on the HIV gpl20 envelope glycoprotein, blocks the binding of gpl20 to the CD4 receptor, and neutralises a broad deficiency, esp at doses of 0.1-10 mg/kg.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          79 spslksrvtisvetsknqfslkltsmtaadtavyycargpvpavfygdyrldp---wqqg 135

Prictin sequences (P66295-51) are nevel human immunoglobulin heavy chain sequences encoded by novel isolated genes. The genes (178949-79602) were isolated and cloued from a series of cosmid constructs: Y202: Y103: Y21: Y6;Y24: 3-31; M84; M18 and M131, by PGR umplification using primers (78917-38. The genes are subdivided into 5 families of VH genes. The fragments cover a region of Ren kh Phe INA fragments were isolated from high molecular weight DNA from human placenta. The DNA was partially digested with Tag restriction enzyme. The Fragments were separated by gel electophoresis and 35-45 kb fractions were collected. The fragments were ilgated with Clal-digested cosmid vector pJ881. The flightion

Human germ-line gene DP-68/JH6 antibody heavy chain.
humanised antibody: human germ-line; heavy chain; variable region;
framework region, teshaped antibody. CDE grafted antibody;
complementarity determining region; immuno silent.
                                                                                                                          DNA fragment comprising human immunoglobulin Vh genes - for the
                                                                                                                                                                                                                                                                                                                                                fragments were in vitro packed and infected into E.coli 490A. fragments were then subcloned by colony hybridisation. The Vh the DNA fragments encoding them are useful in producing human immunoglobulin in mammalian hosts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                             Score 567; DR 12; Length 117;

Disclosure: Fig 5, 32pp; English.

The DNA sequence of eleven monoclonal antibodies are represented in 0119145-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDR 1, 2, and 3 regions, which may be selected from different antibody mols, having varied binding specificity. The chimaeric anti-RhD antibodies can be used for diagnosis and therapy, and are capable of providing bloodbe used in passive immunisation to prevent haemolytic disease of the

The DNA sequence of eleven monoclonal antibodies are represented in 011945-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDR 1, 2, and 3 regions, which may be selected from different antibody mols, having varied binding specificity. The chimaeric anti-khi antibodies can be used for diagnosis and therapy, and are capable of providing bloodtyping reagents of high specificity and reliability. They can also
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         60 npslrsrvtisvdtskngfslklgsvtaadtavyycarvlysrtisgysy-ymdywgkgt 118

                                                                                                                                                                                                                                                                             ò
The sequences given in R93553-54 represent the heavy and light chains respectively of a monoclonal antibody against a 65 kG antigen of human cytomegalovirus (hCMV). The DNA's encoding these sequences were amplified using the sequences given in T18040-58. The monoclonal antibody may be used in the diagnosis of hCMV.

The DNA sequence of eleven monoclonal antibodies are represented in 0119145-57. Synthetic genes, for both heavy and light chains may be created by combining selected CDR 1, 2, and 3 regions, which may be selected from different antibody mols, having varied binding specificity. The chimaeric anti-RHD antibodies can be used for diagnosis and therapy, and are capable of providing bloodtyping reagents of high specificity and reliability. They can also be used in passive immunisation to prevent haemolytic disease of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 9; Page 212; 248pp: English.

Lymphocyte mRNA was converted to CDNA and subjected to PCR amplification using primers specific for heavy and light chain variable regions. The amplification products were inserted into a dicistronic vector to produce a library of fragments. E.coli XLI Blue cells were transformed with the library. Filamentous phage were produced which expressed the MAD regions on their surface. Panning with gpl20 and gp41 resulted in the recovery of immunoractive clones. The heavy chain VH region sequence R54270 neutralises HIVI

Example 3: Fig 18: 366pp; English.

Free sequences given in W01315-19; represent the heavy chain variable regions (VH) of a series of antibody fragments (FAb's) which are immunoreactive with HIV glycoprotein gp41. This sequence represents chains which bind to the light chain clones given in W0130-24. A monoclonal antibody containing one of these Pab sequences may have the capacity to reduce HIV infectivity titre in an in vivo virus infectivity assay by 50 % at a concentration of less than 700 ng of antibody/m1.

The MAD may be used for determining immunocompetence of a human anti-HIV antibody and in the detection of HIV infection.

Human immunoglobulin variable heavy chain #52.

Primer: PCR, amplify, human: immunoglobulin, variable, heavy chain, cosmid; placenta; vector; pIBBl; E.coll; mammalian.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Vh 71-4 gene (042697).
Ab26 (042702) was derived from CD5· B cells of a healthy donor and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Disclosure; Page 64; 109pp; English.
The nucleotide sequence of rearranged F105 Vh (942698) was compare to two monoclonal antibodies (Ab26 · 942702) and 268·D · 942703), which by nucleotide sequence analysis, appear to use a rearranged
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             DNA segments encoding menoclonal antibody - which binds to gp120 and neutralises HIV, for treating AIDS, and for diagnosing and monitoring HIV infection

and graft-versus-host disease.

```
Monkey monoclonal antibody binding human B7.1 or B7.2 antigen monkey monoclonal autoimmune disease or graft-versus-host disease useful for treating autoimmune disease or graft-versus-host disease claim 14; Fig 10B; B1pp; English.

Corms of the light and W01821 respectively comprise primatised b7.1 antigen monoclonal antibody 16C10. Cloned 16C10 light and b7.1 antigen monoclonal antibody 16C10. Cloned 16C10 light and chavy chain constant region genes to allow prodn. of the primatised antibodies have also been produced (see also W01817-20). The antibodies have also been produced (see also W01817-20). The primatised antibodies inhibit the B7:CD28 pathway, making them useful immunosuppressants for the treatment of autoimmune disorders
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        20 qvqlqesgpglvkpsetlsltctvsggsv-ssyywswirqppgkglewigyiyysgstny ^{78}

Primatised anti-human B7.1 antigen antibody 16C10 heavy chain.
Monoclonal antibody: Cynomolgus monkey: macaque: 16C10;
primatised antibody: B7 antigen; CD28; immunosuppressive:
autoimmune disease; idiopathic thrombocytopaenia purpura;
systemic lupus erythematosus; rheumatoid arthritis; psoriasis;
type 1 diabetes mellitus; graft versus host disease;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 116;

New New Notation (Notation Figure 1) and the standard form the production of human immunoglobulin to mammalian hosts

Production of human immunoglobulin in mammalian hosts

Production of human immunoglobulin in mammalian hosts

Production of human immunoglobulin heavy chain

Production squences (R66295-51) are novel human immunoglobulin heavy chain

C sequences encoded by novel isolated genes. The genes (078839-79002) were

C solated and cloned from a series of cosmid constructs. 1202; 1103; 721;

C Sisolated and cloned from a series of cosmid constructs. 1202; 7103; 721;

C Sisolated and cloned from a series of cosmid constructs. 1202; 7103; 721;

C Sisolated and cloned from a series of cosmid constructs were isolated from the product weight DNA from human placenta. The DNA was partially considered with Tagl restriction enzyme. The fragments were separated by a cidested with clal-digested and infected into E.coli 490A. The fragments were then subcloned by colony hybridisation. The VH genes and the consumption human hosts.

Attibody containing immunoglobulin heavy chain mutation - with thyroid function stimulating activity
(Jaim 31, Page 14-15; 18pp; Japanese.
WA4536-W24539 represent the immunoglobulin heavy and light chain variable regions isolated from peripheral blood lymphocyte strains. These sequences were isolated from the B6B7 and 101-2 strains of peripheral blood lymphocytes of a Hasedow's disease patient. These sequences are replaced, deleted or inserted into an antibody, to create the antibodies of the invention. The antibodies of the invention have thyroid function antibody can be used in a method to detect autoantibodies which have thyroid function stimulating activity.
Immunoglobulin; variable region; heavy chain; thyrotropin receptor;
thyroid stimulating activity; light chain; Basedow's disease; antibody;
peripheral blood lymphocyte.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     79 nsslksrvtisvdtsknqfslklssvtaadtavyycaree-rggl-rdfaygmdvwgggt 136

Mean 30.371; Variance 159.298; scale 0.191 Statistics: Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

The antibodies are also useful as multiple targetting moieties, providing at least 2 kinds of biological activity. They can also be used in diagnostic assays and for the imaging of tumours when attached to a radiolabel and for the pathological diagnosis of tumours. Humanised antibodies are less immunogenic than the mouse MAbs B1, B3 and B5, making them more suitable for long term

Claim 16: Fig la(i): 1849b; English.

This polypeptide sequence comprises the VH domain of human scFV antibody lBZ (also known as TA3), which is specific for transforming growth factor (TGF) beta-1. It is encoded by a gene (TG0380) isolated from a peripheral blood lymphocyte library. The antigen-binding domains of human antibodies (see WiS522 40) to TGF beta-1 and/or beta-2 can be used to counter the adverse effects of EGE beta, such as (i) promotion of fibrosis (in dermal, coular or keloid scarring, lung fibrosis, arterial injury, proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Indels 1; Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 qvqlvesgggvvqpgrslrlscaasgftfssygmhwvrqapgkqlewvavisydqsnkyy 60

Nucleic acids encoding human antibody VH and VL can be used for prodn. of recombinant antiqen-binding domains. These are highly specific, have low dissociation constants (prof. less than 5 nM) and low ICSOs for neutralisation.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           27-NoV-1997 (first entry)
Anti-TGF beta-1 scFv antibody 1-B2 VH domain.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       \frac{1}{2}
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   A process for isolating and synthesising human monoclonal anti-tumour antibodies has been produced. The process involves: (a) constructing at least one fusion phage library from the peripheral blood lymphoryres (PBLS) of a cancer patient; (b) screening for anti-tumour antibodies in the phage library in a binding assay with cultured tumour cells of the same type as the patient's tumour; (c) removing extraneous antibodies by absorption against normal human cells; (d) cloning the phage selected in step (b) and (c); (e) assaying the specificity of the cloned phage by incubating the phage with at least two types of cultured normal cells; and (f) further besting the specificity of cloned phage that do not bind to either cell line of cultured from more than one other tumour that is not the patient's tumour. The present sequence represents a human heavy can be an antibody, from an scrv antibody fusion phage library, produced by a method as described above The antibody fusion phage library, produced by a method as described above The antibody fusion phage library, produced by antigens for studying tumourigenesis or for use as anti-cancer vaccines. The human antibodies have low immunogenicity in humans compared to murine monoclonal antibodies (MADS). Since the antibodies are isolated

Disclosure, Fig 14, 732p, English.

The DNA sequence of eleven monoclonal antibodies are represented in 0.1914-5-7. Synthetic genes, for both heavy and light chains may be created by combining selected CDF 1, 2, and 3 regions, which may be selected from different antibody mols. having varied binding specificity. The chimacric anti-Rhb antibodies can be used for diagnosis and therapy, and are capable of providing blood-typing reagents of high specificity and reliability. They can also be used in passive immunisation to prevent haemolytic disease of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      1 ggvvqpgrslrlscaasgftfssygmhwvrqapgkglewvaviwydgsnkyyadsvkqrf 60

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        11-007-1996 (first entry)
Heavy chain variable region of human G36005 antibody.
antibody; humanised; murine; human; heavy chain: light; variable; framework region; complementarity determining region; reshaping; modelling; surface residue; modify.
                                                                producing members of specific binding pairs - by expression in recombinant host cells with a secreting replicable genetic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pedersen JT, Rees AP, Roguska MA, Searle SMJ:
